

European Technical Assessment

ETA 18/0675 of 06/06/2021

Technical Assessment Body issuing the ETA: Technical and Test Institute

for Construction Prague

Czech Republic eota@tzus.cz

Trade name of the construction product Chemset[™] Reo502[™] EF Plus

Epcon[™] C6 EF Plus Epcon[™] G5 PRO

Product family to which the construction

product belongs

Product area code: 33

Bonded injection type anchor for use in cracked and uncracked concrete

Manufacturer Ramsetreid

A Division of ITW Australia Pty Ltd

1 Ramset Drive, Chirnside Park. Vic 3116

Australia

Manufacturing plant Ramsetreid Plant

This European Technical Assessment contains

19 pages including 16 Annexes which form

an integral part of this assessment.

This European Technical Assessment is issued in accordance with regulation

(EU) No 305/2011, on the basis of

EAD 330499-01-0601

Bonded fasteners for use in concrete

This version replaces

ETA 18/0675 issued on 16/01/2020

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (excepted the confidential Annex(es) referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body - Technical and Test Institute for Construction Prague. Any partial reproduction has to be identified as such.

1. Technical description of the product

The Chemset[™] Reo502[™] EF Plus, Epcon[™] C6 EF Plus, Epcon[™] G5 PRO with steel elements is bonded anchor (injection type).

Steel elements can be galvanized or stainless steel threaded rods or rebars.

Steel element is placed into a drilled hole filled with injection mortar. The steel element is anchored via the bond between metal part, injection mortar and concrete. The anchor is intended to be used with various embedment depth up to 20 diameters.

The illustration and the description of the product are given in Annex A.

2. Specification of the intended use in accordance with the applicable EAD

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed working life of the anchor of 50 years and 100 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the products in relation to the expected economically reasonable working life of the works.

3. Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex C 1, C 2
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 3, C 4
Displacements under short-term and long-term loading	See Annex C 5
Characteristic resistance and displacement for seismic performance categories C1 and C2	See Annex C 6, C 7, C 8

3.2 Hygiene, health and environment (BWR 3)

No performance determined.

3.3 General aspects relating to fitness for use

Durability and serviceability are only ensured if the specifications of intended use according to Annex B 1 are kept.

4. Assessment and verification of constancy of performance (AVCP) system applied with reference to its legal base

According to the Decision 96/582/EC of the European Commission¹ the system of assessment verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) given in the following table apply.

Product	Intended use	Level or class	System
Metal anchors for use in concrete	For fixing and/or supporting to concrete, structural elements (which contributes to the stability of the works) or heavy units	-	1

-

Official Journal of the European Communities L 254 of 08.10.1996

5. Technical details necessary for the implementation of the AVCP system, as provided in the applicable EAD

The factory production control shall be in accordance with the control plan which is a part of the technical documentation of this European Technical Assessment. The control plan is laid down in the context of the factory production control system operated by the manufacturer and deposited at Technický a zkušební ústav stavební Praha, s.p.² The results of factory production control shall be recorded and evaluated in accordance with the provisions of the control plan.

Issued in Prague on 06.06.2021

By

Ing. Mária Schaan Head of the Technical Assessment Body

-

The control plan is a confidential part of the documentation of the European Technical Assessment, but not published together with the ETA and only handed over to the approved body involved in the procedure of AVCP.

Chemset [™] Reo502 [™] EF Plus, Epcon [™] C6 EF Plus, Epcon [™] G5 PRO	
Product description Rebars and materials	Annex A 4

Specifications of intended use

Anchorages subject to:

- Static and quasi-static load
- Seismic actions category C1 (max w = 0,5 mm):
 - threaded rod size M8, M10, M12, M16, M20, M24, M27, M30
 - rebar size Ø10, Ø12, Ø16, Ø20, Ø25, Ø32
- Seismic actions category C2 (max w = 0,8 mm): threaded rod size M12, M16, M20

Base materials

- · Cracked and uncracked concrete
- Reinforced or unreinforced normal weight concrete of strength class C20/25 at minimum and C50/60 at maximum according EN 206:2013.

Temperature range:

• T3: -40°C to +70°C (max. short. term temperature +70°C and max. long term temperature +50°C)

Use conditions (Environmental conditions)

- (X1) Structures subject to dry internal conditions (zinc coated steel, stainless steel, high corrosion resistance steel).
- (X2) Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel A4, high corrosion resistant steel).
- (X3) Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist (high corrosion resistant steel).

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Concrete conditions:

- I1 installation in dry or wet (water saturated) concrete and use in service in dry or wet concrete.
- 12 installation in water-filled (not sea water) and use in service in dry or wet concrete

Design:

- The anchorages are designed in accordance with the EN 1992-4 under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings.
- Anchorages under seismic actions (cracked concrete) have to be designed in accordance with EN 1992-4.

Installation:

- Hole drilling by hammer drill mode.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

Installation direction:

• D3 – downward and horizontal and upwards (e.g. overhead) installation

Installation procedure

Before commencing installation ensure the operative is equipped with appropriate personal protection equipment, SDS Hammer Drill, Air, Hole Cleaning Brush, good quality Dispensing Tool – either manual or power operated, Chemical cartridge with mixing nozzle and extension tube. if needed.

1. Drill hole of diameter (d₀) and depth (h₀) with a hammer drill set in rotation hammer mode using an appropriately carbide drill bit.

2. Using compress air cleaning (mini 6 bars), use the appropriate extension and air nozzle, starting from the bottom of the hole blow out at least 2 times and until no dust is evacuated.

3. Using the relevant RAMSET brush and extension fitted on a drilling machine (dimensions of the brush see table B1 and B2), starting from the top of the hole in rotation, move downward to the bottom of the hole then move upward to the top of the hole. Repeat this operation. Any worn brush must be replaced by a new brush $(\emptyset_{brush} > \emptyset_{hole})$.

4. Repeat Step 2

7. If water is present, brush sides of hole

5. Repeat Step 3

6. Repeat Step 2

8. Follow any special opening instructions on the cartridge label and attach mixing nozzle.

Load cartridge into applicator.

10. Dispense initial 1 or 2 trigger pulls to waste to ensure correct mixing.

11. Insert end of nozzle to bottom of hole and squeeze trigger to dispense adhesive, withdrawing nozzle as hole fills.

12. Insert fixing with a twisting motion to release trapped air.

13. Do not disturb fixing until curing time has elapsed. Attach fixture and tighten nut to recommended torque.

Table C10: Displacement under tensile and shear load - seismic category C2 of threaded rod

Size		M12	M16	M20
δ N,eq(DLS)	[mm]	0,20	0,40	0,77
δ N,eq(ULS)	[mm]	0,76	0,74	1,68
δ V,eq(DLS)	[mm]	5,29	4,12	4,94
δ V,eq(ULS)	[mm]	10,20	9,05	10,99

The anchor shall be used with minimum rupture elongation after fracture A_{5} equal to 19%.

Chemset [™] Reo502 [™] EF Plus, Epcon [™] C6 EF Plus, Epcon [™] G5 PRO
