

WallMate™ Anchors

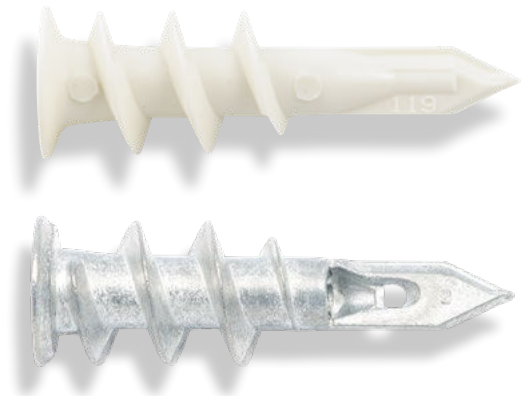

PERFORMANCE	MATERIAL	INSTALLATION RELATED

Description

The WallMate™ is the original self-drilling plasterboard anchor. Available in High Strength Nylon or Zinc, the WallMate™ is incredibly simple to use, requiring only a screwdriver to install, but also incredibly fast.

Features

- Both versions of the WallMate™ feature an effective drill point for easy penetration of plasterboard and fast installation.
- If a long screw is used to secure the fixture, the anchor's drill point will break away so as not to restrict achievement of a firm fix.
- The anchor's screw thread profile is designed for efficient cutting and positive grip
- Both the screw and the WallMate™ can be easily removed without losing the anchor inside the cavity, without damaging the plaster around the installation hole.
- The unique composition of Glass and Nylon increases the strength of the material, making this High Strength Nylon.

Installation

SCREWDRIVER	LOW SPEED DRILL	UP TO 15mm	100mm min Adding anchors does not increase maximum load recommendation

1. Using a # 2 Phillips Head screwdriver with the WallMate™ pierce through the plaster board.
2. Alternatively, a drill on low speed can be used to pierce through the plaster board stop before flush.
3. Gently hand tighten the WallMate™ until the head sits flush with the surface.
Do not over tighten.
4. Attach the desired Fixture up to a thickness of 15mm using a 6-8 Gauge screw.

PLASTERBOARD	
WALL THICKNESS	SHEAR TENSION
10mm	24Kg 10Kg
13mm	33Kg 15Kg

WEAR EYE PROTECTION			

Wallmates are not for overhead use, installing tv's or anchoring furniture (eg a chest of drawers) to walls
